

INTERPAK LTD RECYCLING STATEMENT

We Recycle 100% of all our Scrap Foam

We at Interpak care about the sustainability of our business and the environment. We work with suppliers to minimise the amount of scrap material which is left over after producing our foam packs.

We have agreements in place with the manufacturers of both our Block Polyurethane foam - and our Sheet Polyethylene foam - and all waste product left over after production - is returned to the manufacturers to Recycle into new product.

In the case of Polyurethane foam - any waste material is returned to the manufacturer where it is bonded and compressed to form chip foam blocks for packaging or high-performance carpet underlay.

Our Polyethylene foam offcuts and waste are returned to the manufacturer where it is shredded, and converted back into granules - which are then used in to produce Marine grade foam planks - for Flootation devices and similar items.

We supply sustainable foam packaging - and this combined with our recycling policy means our packaging materials don't cause environmental damage.
